Exercise 2 – Add Summary LLM node in Passport Audit Agent	6
Appendix A - Prompts and reference snippets	10

Lab Objectives

In this lab, participants configure information display output for AI Agent Studio workflow agents. Participants will update the InitDisplay branch first, then add a Summary LLM branch and route the Summary OraMessageHint value through the switch node.

By the end of this lab, participants will be able to:

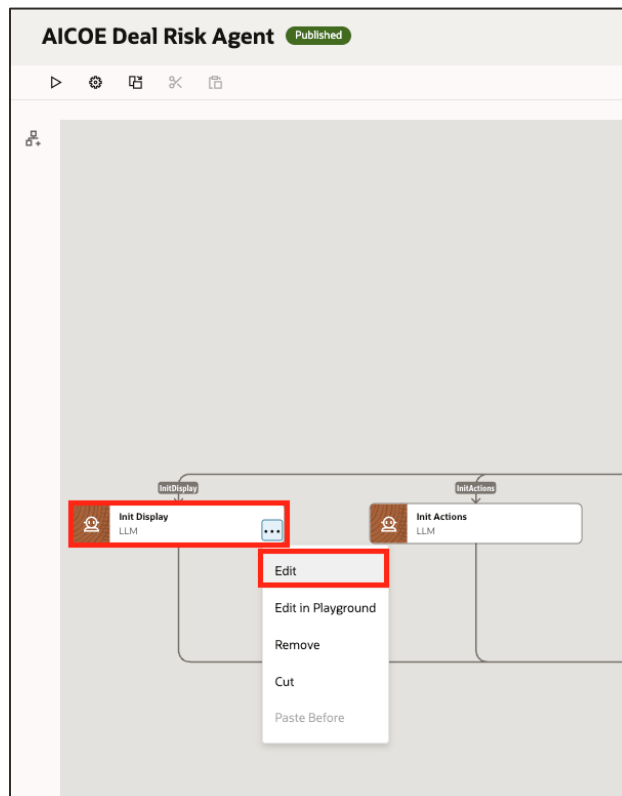

- Identify which switch outcome is used by OraMessageHint = InitDisplay and OraMessageHint = Summary.
- Update the InitDisplay prompt so a widget renders additional columns.
- Review the App Experience tab to understand how the app selects and renders widget output.
- Add a Summary LLM node to the participant's own workflow agent, route Summary in the switch node, and validate the app summary output.

Exercise 1 – Review and Edit InitDisplay prompt in Deal Risk Agent

Goal: Update the Init Display prompt for Deal Risk Agent so the information display includes two additional columns: Revenue (USD) and Win Prob (%). This teaches how LLM prompt instructions shape structured widget output.

Step	Instruction	Expected Result
1.1	In AI Agent Studio, open Agent Teams and search for [Your Initial] Deal Risk Agent.	The Deal Risk Agent workflow opens.
1.2	Locate the InitDisplay Message Hint switch in the workflow.	The information display branch is identified.
1.3	Click the ellipsis menu on the Init Display node and select Edit.	The LLM properties page opens.

Reference screenshot - Open the Init Display LLM node for editing.

Add Revenue (USD) and Win Prob (%) to the Init Display field list.

Step	Instruction	Expected Result
1.4	Review the Init Display prompt and locate the list of fields returned as a multiRecordWidget.	The output column list is identified.
1.5	Add Revenue (USD) to the field list immediately after Deal Risk.	Revenue will be shown as a display column.
1.6	Add Win Prob (%) immediately after Revenue (USD). prompt provided in Appendix A.1	Win probability will be shown as a display column.
1.7	Keep the rest of the risk-selection, signals, action-logic, and rules sections unchanged.	Only the information display columns are changed.
1.8	Go to App Experience tab and Ensure “Multi Record” is selected in Widgets LOV. Also Enable Actions & Enable Communications toggle so that LLM generated actions are clickable.	Widget selection (Multi Record)
1.9	Save the LLM node changes and publish the workflow agent.	The updated Init Display prompt is active.

Reference screenshot - Add Revenue (USD) and Win Prob (%) to the Init Display field list.

Code

INIT_DISPLAY

Er

Prompt

You are a Deal Risk Diagnostic Agent.

INPUT:

{{context.\$variables.Opportunities.items}}

GOAL

Provide a clear diagnostic view of deal risk.

Return ONE section:

1) Top Risk Opportunities (structured data)

SECTION — Top Risk Opportunities

Select TOP 5 opportunities based on:

- lowest WinProb with highest Revenue

- highest AverageDaysAtStage with highest revenue

Return as multiRecordWidget with:

- Name

- RecommendedAction (if present)

- Deal Risk

- Revenue (USD)

- Win Prob (%)

Deal Risk badge:

- STALLED → alert

- COMPETITIVE → warning

- LOW WIN PROBABILITY → info

Keep Stalled first, competitive second, and low win probability opportunities at the end.

Generate 3 concise signals:

- STALLED → List high revenue opportunities that are stalled.

- COMPETITIVE → List high revenue opportunities that are competitive.

- LOW WIN PROBABILITY → List high revenue opportunities that have low win probability. Use a more focused approach if they have high revenue potential, or ignore them if they have low revenue potential.

SECTION — ACTION LOGIC

App Experience Tab:

Output

App Experience

Enable Actions for the widgets

☐

?

Enabling this will allow the agent to generate recommended actions.

Enable Communications for the widgets

☐

?

Enabling this will allow the agent to generate recommended communication items.

Select the widgets you want to use

Multi Record

Step	Instruction	Expected Result
1.10	Run or preview the application using [Your Initial] Deal Risk Agent.	The app loads the deal risk display.
1.11	Confirm the Top Risk Opportunities widget includes Name, RecommendedAction, Deal Risk, Revenue (USD), and Win Prob (%).	The two added columns render in the information display.

Deal Risk

Top Risk Opportunities

Here is a diagnostic view of the top 5 risk opportunities prioritized by deal risk signals including stalled, competitive, and low win probability with high revenue. Actions are suggested for next steps to address these risks.

Name	Recommended Action	Deal Risk	Action
KPN Oracle Fusion Cloud HCM rollout	Address the competitive threat	Competitive	Log a Call
Grant Thornton payroll reconciliation production support	Prepare Presentation, Deliver Proposal	Stalled	Create Task
Nokia payroll and HCM consolidation project	In the discovery phase the primary goal is to establish relationships with the customer and understand the business pain points and gather detailed requirements with the help of Solution consultants	Low win probability	Log an Interaction
Arqlva Oracle Fusion Cloud HCM Implementation	Looking for the Right Contacts, Characteristics, Determining the Need, Budget and Sponsor	Low win probability	Create Appointment
TTX core finance and procurement cloud implementation	Looking for the Right Contacts, Characteristics, Determining the Need, Budget and Sponsor	Low win probability	Create Note

After:

Deal Risk

Top Risk Opportunities

The following table highlights the top 5 deal risk opportunities based on lowest win probability combined with highest revenue and longest average days at stage. Opportunities are categorized by deal risk with recommended next steps for follow-up.

These opportunities show significant risk due to stalled progress, competitive pressures, or low win probabilities despite high revenue potential. Recommended next steps include logging calls, creating tasks or appointments, and starting web conferences to improve engagement and deal progression.

Name	Recommended Action	Deal Risk	Revenue (USD)	Win Prob (%)	Action
KPN Oracle Fusion Cloud HCM rollout	Log a Call	Stalled	\$240,000	10	Log Call
TTX core finance and procurement cloud implementation	Create Task	Competitive	\$94,403	13	Create Task
Darigold supply chain standardization and planning project	Log a Call	Competitive	\$98,654	16	Log Call
Grant Thornton payroll reconciliation production support	Create Appointment	Low win probability	\$65,107	41	Create Appointment
Nokia payroll and HCM consolidation project	Start Web Conference	Low win probability	\$416,964	19	Start Web Conference

Exercise 2 – Add Summary LLM node in Passport Audit Agent

Goal: Add a Summary LLM node to the [Your Name Initials] Passport Audit workflow and route the Summary OraMessageHint to the new node. This teaches how the app requests a compact executive summary from a workflow agent during application startup.

Passport Audit workflow area with missing OraMessageHint.

Step	Instruction	Expected Result
2.1	In AI Agent Studio, open Agent Teams and search for [Your Initials] Passport Audit.	The [Your Initials] Passport Audit workflow opens in edit mode.
2.2	Review the existing workflow: Set Domain > GatherInfo > App Action switch, followed by branches for InitSubtitle, InitDisplay, InitCommunications and Query.	You understand where OraMessageHint routing happens.
2.3	Identify the App Action switch node. This switch evaluates <code>{{context.\$app.\$OraMessageHint}}</code> and routes application startup requests to the correct LLM branch. Add Summary as one of the case values.	Summary message hint branch is added to the agent.

Include 'Summary' as one of the values under "Case values".

Summary

Passport Audit workflow area with missing Summary branch:

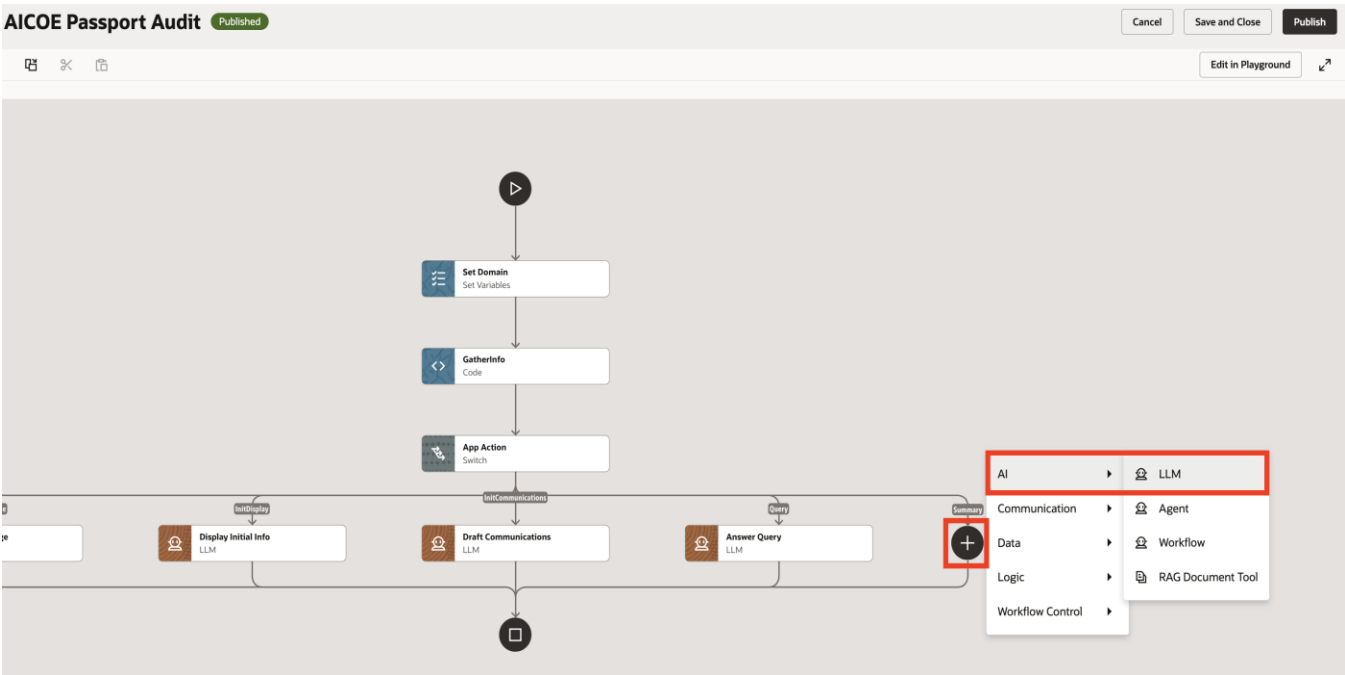

Add an LLM node from the Nodes panel.

Step	Instruction	Expected Result
2.4	Open the node palette on the left side of the workflow designer.	The Nodes panel is visible.
2.5	Under AI, click the plus (+) next to LLM to add a new LLM node to the workflow canvas.	A new LLM node is added.
2.6	Place the new LLM node on the App Action switch branch area and name it Summary.	The node is clearly labeled Summary.
2.7	Node Code is [auto-populated]	The workflow has a Summary node.

Reference screenshot - Passport Audit workflow area where the Summary branch is added.

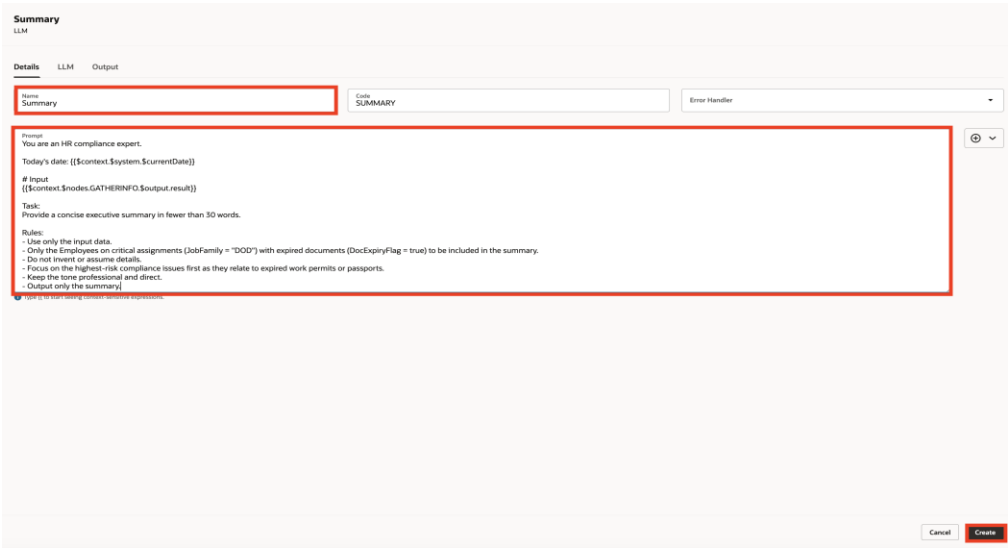

Reference screenshot - Add an LLM node by clicking on “+” under Summary.

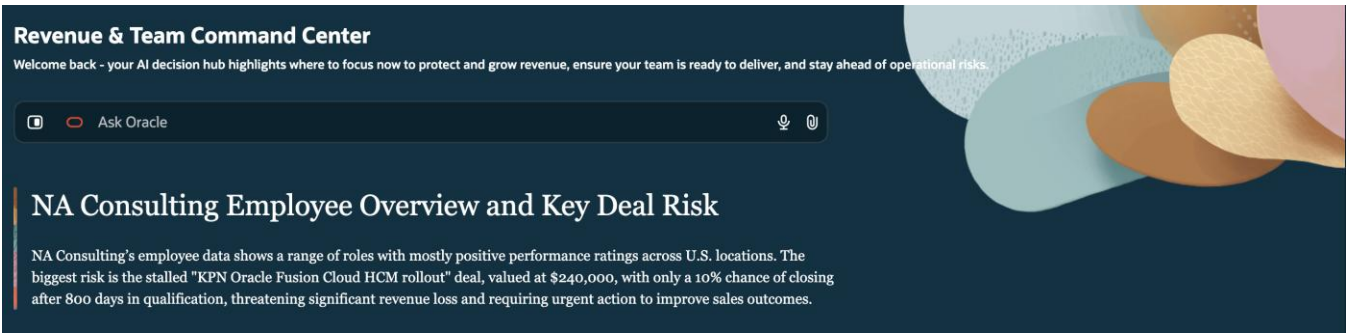

Summary LLM node configuration and prompt area.

Step	Instruction	Expected Result
2.8	Edit the Summary LLM node prompt. Paste the Summary prompt provided in Appendix A.2.	The Summary node prompt is configured.
2.9	Save or create the node changes.	The Summary node is saved.
2.10	Publish the [Your Initials] Passport Audit.	

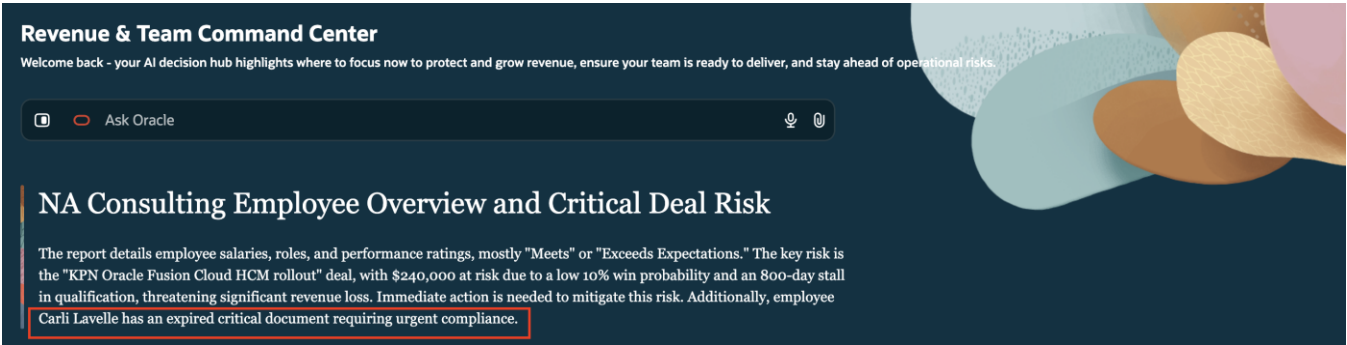

Reference screenshot - Summary LLM node configuration and prompt area.

Passport Audit Before:

After: (Summary of expired passport will be appended in summary section. Sample highlighted below)

Appendix A - Prompts and reference snippets

A.1 InitDisplay field-list snippet

Return as multiRecordWidget with:

- Name
- RecommendedAction (if present)
- Deal Risk
- Revenue (USD)
- Win Prob (%)

A.2 Summary LLM prompt

You are an HR compliance expert.

Today's date: {{\$context.\$system.\$currentDate}}

Input
{{\$context.\$nodes.GATHERINFO.\$output.result}}

Task:
Provide a concise executive summary in fewer than 30 words.

- Rules:
- Use only the input data.
 - Only the Employees on critical assignments (JobFamily = "DOD") with expired documents (DocExpiryFlag = true) to be included in the summary.
 - Do not invent or assume details.
 - Focus on the highest-risk compliance issues first as they relate to expired work permits or passports.
 - Keep the tone professional and direct.
 - Output only the summary.
