Lab Objectives	2
Exercise 1 – Import Agents	3
Exercise 2 – Create Negotiations Workload Monitor	5
Exercise 3 – Create Negotiations Award Advisor	13
Exercise 4 – Create Sourcing Command Center App	25
Application Validation	34

Lab Objectives

In this lab, participants will build a Sourcing Command Center agentic application from scratch in Oracle Fusion AI Agent Studio. The application orchestrates two workflow agents that work side-by-side to give procurement teams a sourcing workload overview and recommend award decisions on pending negotiations.

By the end of this exercise, participants will be able to:

1. Update workflow agents that have nodes for Business Object Functions, code, switches, if-conditions, and LLM responses.
2. Configure agent inputs, outputs, parameter mapping, and exposure to agentic applications.
3. Build an agentic application using the Swimlanes layout pattern with two side-by-side agents.
4. Configure application panels, actions including **Send Agent Command** and **Navigate to App**, and PowerPoint communications.
5. Understand how **OraMessageHint** routes workflow execution through different functional branches.
6. Test and validate workflow execution, queries, panel navigation, actions, and communications.

Lab Reference Files

Keep reference file open in a separate window during the lab and copy from them when prompted:

- **Prompts.txt** — paste this whenever a step says **Prompt**

File is divided into sections by node code. Find section that matches your current step and copy contents from there.

Exercise 1 – Import Agents

In this exercise, we will import the skeleton of both workflow agents that are required to build the agentic application. JSON file for the agents below is shared with this lab. You can import them with your initials and then add required nodes for agentic application.

1. Negotiations Award Advisor
2. Negotiations Workload Monitor

Use guidance below for the first agent and perform the same for second agent.

1. Open JSON file in any text editor and locate **XXXX** present at two locations near the end of file.

```

"WorkflowCode": "XXXX_NEGOTIATIONS_AWARD_ADVISOR",
"Name": "XXXX Negotiations Award Advisor",
"Description": "Identifies negotiations pending award that need attention such as those
with past award dates, prolonged closed status, or rejected awards, and recommends
applying award decisions as a priority action.",
"Family": "PRC",
"Product": "SOURCING",
"HiddenFlag": false,
"AiAppsCompatibleFlag": false,
"UseCaseId": "NA",
"SourceWorkflowId": null,
"AccessModifier": "public",
"StartQuestionOne": null,
"StartQuestionTwo": null,
"StartQuestionThree": null,
"FollowUpPromptEnabledFlag": false,

```

2. Replace both instances of **XXXX** with your initials and save the JSON file.

E.g., If your name is “Sheldon Cooper”, it will be “**SHCO** Negotiations Award Advisor” in the second line and so on.

```

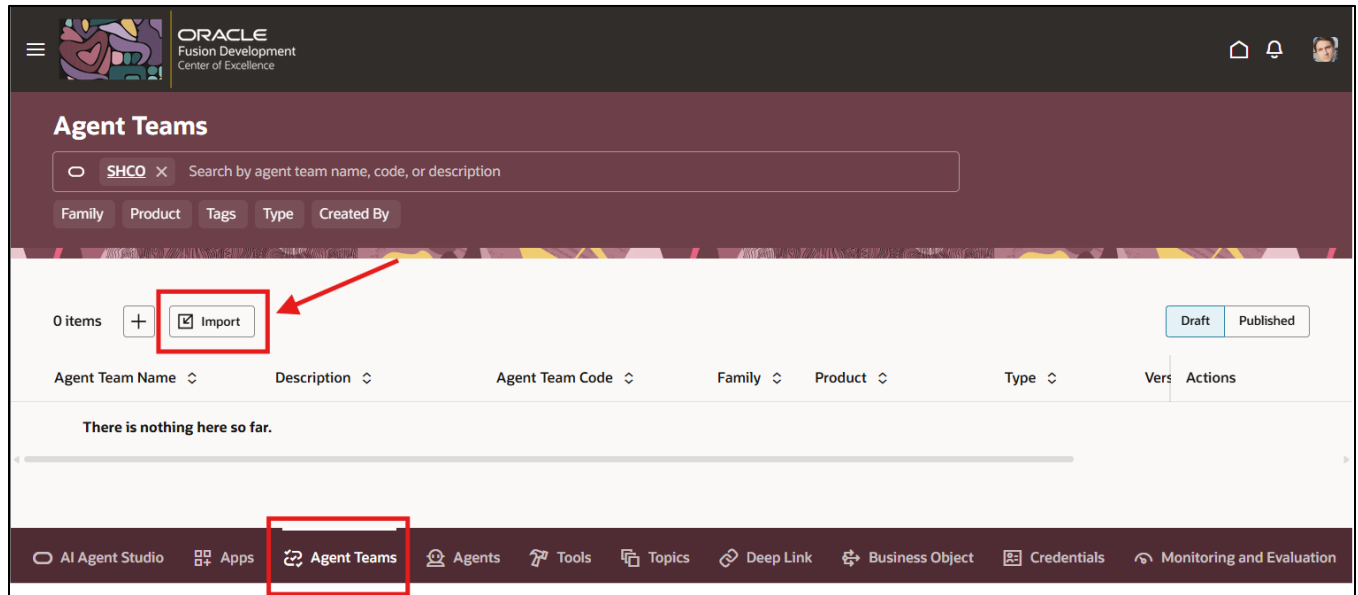

"WorkflowCode": "SHCO_NEGOTIATIONS_AWARD_ADVISOR",
"Name": "SHCO Negotiations Award Advisor",
"Description": "Identifies negotiations pending award that need attention such as those
with past award dates, prolonged closed status, or rejected awards, and recommends
applying award decisions as a priority action.",
"Family": "PRC",
"Product": "SOURCING",
"HiddenFlag": false,
"AiAppsCompatibleFlag": false,
"UseCaseId": "NA",
"SourceWorkflowId": null,
"AccessModifier": "public",
"StartQuestionOne": null,
"StartQuestionTwo": null,
"StartQuestionThree": null,
"FollowUpPromptEnabledFlag": false,

```

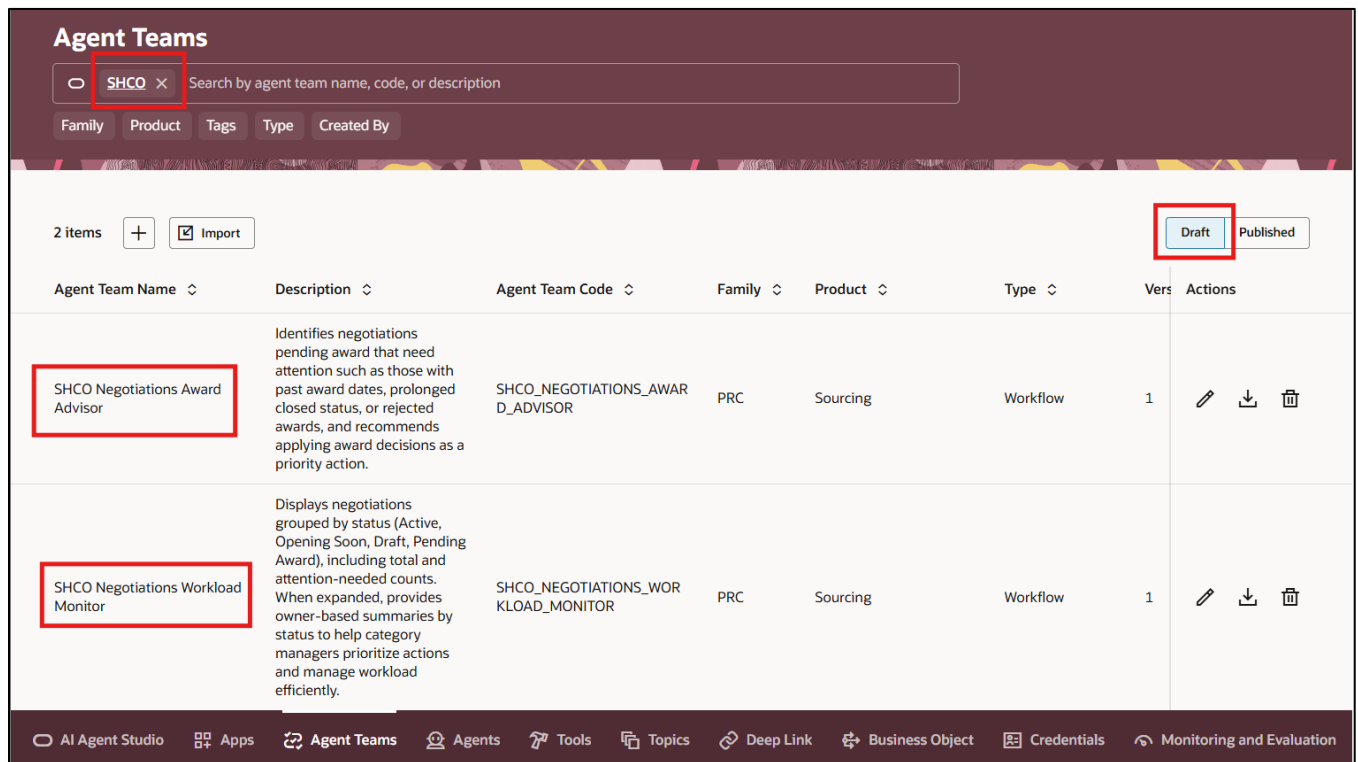

Now login to the lab environment using the credentials provided. **Make sure to use your assigned user – You can use the SCM user assigned to you.**

3. Navigate to **Tools** → **AI Agent Studio**

Go to the **Agent Teams** tab and click on Import. In the import panel, upload the JSON file saved in Step 2 earlier.

After importing both the workflow agents provided with this exercise, they will show up with your initials in **Draft** tab.

This completes all tasks assigned to you for this lab exercise.

Exercise 2 – Create Negotiations Workload Monitor

In this exercise, we will update workflow agent that provides a sourcing workload overview by analyzing negotiations across statutes (Active, Opening Soon, Draft, Pending Award) and highlights negotiations requiring attention.

Search for the “[Your name initials] Negotiations Workload Monitor” under **Agent Teams** tab in **AI Agent Studio**.

Configuration

Go to agent setting and “Turn On” the **Enable to Agentic Apps** toggle under **Details** tab.

Review **Triggers** tab to check the Webhook parameters that will be used in this agent to interact with application.

Review **Variables** tab to check custom variable(s) used in this agent to move information between nodes.

When done, click on **Update** to save the changes.

SHCO Negotiations Workload Monitor

Details | LLM | Security | Chat Experience | Questions | **Triggers** | **Variables** | Error Handling

Agent Team Name: SHCO Negotiations Workload Monitor

Agent Team Code: SHCO_NEGOTIATIONS_WORKLOAD_MONITOR

Family: PRC

Product: Sourcing

Type: Workflow

Tags:

Maximum Interactions: [v] [^]

Description: Displays negotiations grouped by status (Active, Opening Soon, Draft, Pending Award), including total and attention-needed counts. When expanded, provides owner-based summaries by status to help category managers prioritize actions and manage workload efficiently.

Expose to Agentic Apps: ☒

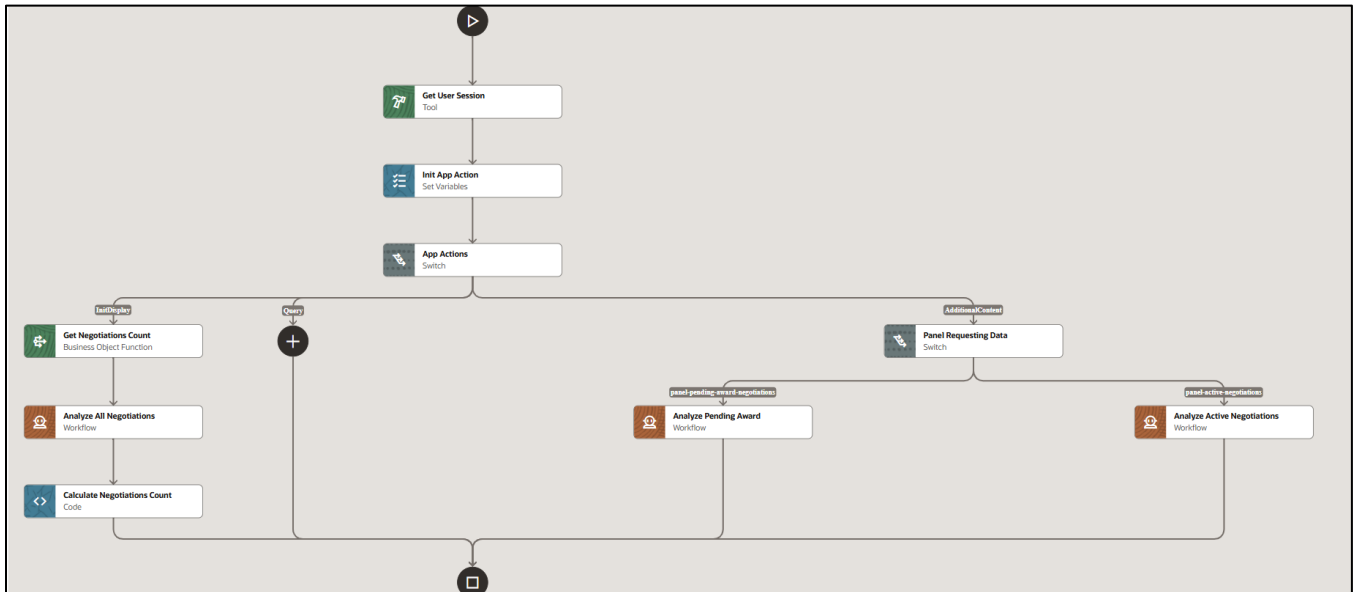

Capture estimated Cost and Time savings

Values can be edited later, so we encourage you to enter your best guess so that your agent is featured in the ROI dashboard

Time saved each agent run: 10 minutes

Cost saved each agent run: \$ 0 USD

Below is how this agent will appear without making any changes.

Now let us review nodes in this agent and add/edit nodes to suit application requirements.

1. **Review:** Init App Action (Set Variables)

This step captures the message hint passed from application into a variable.

This hint is used to tell workflow agent about the type of activity to be performed.

Init App Action

Set Variables

Name

Init App Action

Code

INIT_APP_ACTION

Variables

AppAction	string
Value	<code>{{context.\$app.\$OraMessageHint}}</code>

2. Review: App Actions (Switch)

This step checks for the message hint stored in the variable and passes process flow to the right branch.

Workflow Routing Overview

The App Actions Switch routes workflow execution into three branches depending on the incoming **OraMessageHint** value:

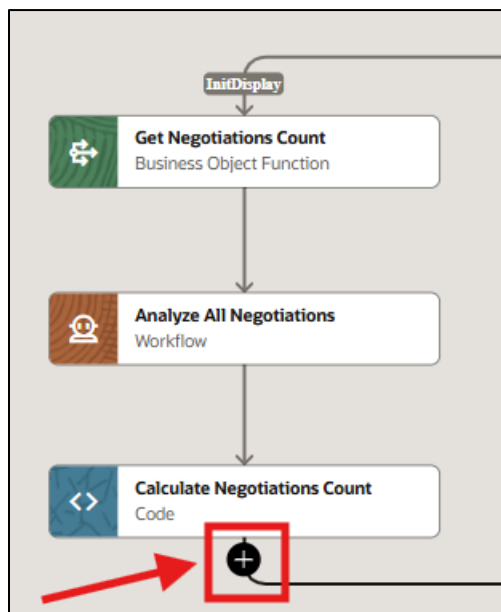

OraMessageHint	Branch Purpose
InitDisplay	Display workload summary on initial load
AdditionalContent	Show panel-specific details when a panel is expanded
Query	Handle sourcing-related user questions typed into chat

3. Edit: Node in the InitDisplay branch:

Tab / Field	Value
Node Type	Workflow
Name	Analyze All Negotiations
Family	PRC
Product	Sourcing
Workflow	COE Negotiations Workload Summary
message	[Leave Blank]

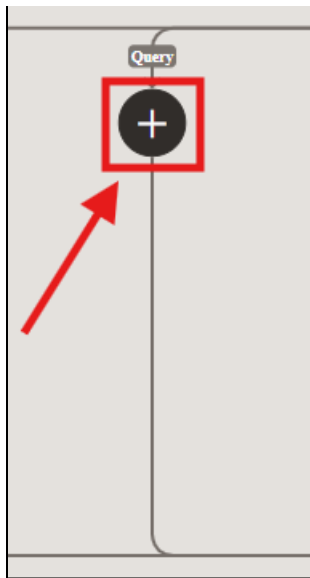

4. **Add:** Node at end of **InitDisplay** branch:

Tab / Field	Value
Node Type	LLM
Name	Display Negotiations Worklist
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.
LLM	GPT-4.1 mini
App Experience	Enable Actions for the widgets (Widgets – Multi Record)

5. **Add:** Node at end of **Query** branch:

Tab / Field	Value
Node Type	Agent
Name	Sourcing Command Center Query
Code	[Autogenerated]
Error Handler	[Leave Blank]
Family	PRC
Product	Sourcing
Agent	Sourcing Command Center Query
App Experience	Enable Actions for the Widgets (Widgets – Messages List)

Input Variables:

Variable	Type	Value
message	String	{{context.\$system.\$inputMessage}}
Attachments	String	{{context.\$app.\$OraAttachments}}
FormattingRules	String	[Leave Blank]
OraChatHistory	String	{{context.\$system.\$chatHistory}}

6. **Review:** Panel Requesting Data (Switch) of **AdditionalContent** branch.

This step checks for the type of panel to be expanded and transfers process flow accordingly.

Panel Requesting Data

7. **Edit:** Node in **panel-pending-award-negotiations** section of **AdditionalContent** branch:

Tab / Field	Value
Node Type	Workflow
Name	Analyze Pending Award
Family	PRC
Product	Sourcing
Workflow	Negotiations Workload Award Pending
message	[Leave Blank]

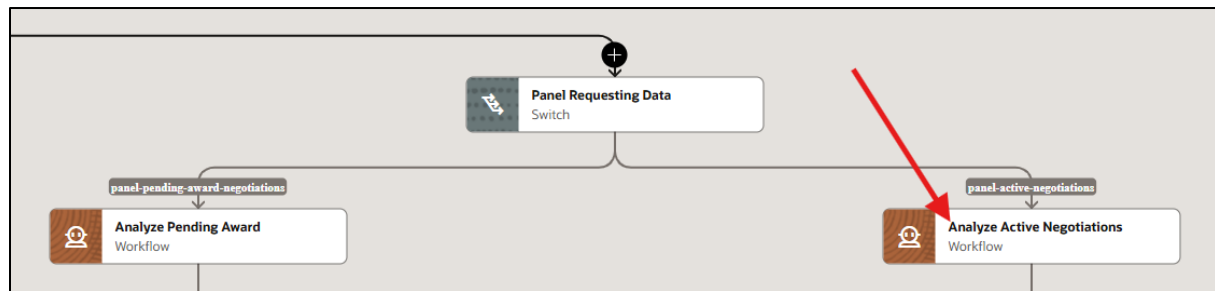

8. **Add:** Node at end of **panel-pending-award-negotiations** section of **AdditionalContent** branch:

Tab / Field	Value
Node Type	LLM
Name	Pending Award Additional Information
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.
LLM	GPT-4.1 mini
App Experience	Enable Actions for the widgets (Widgets – Multi Record)

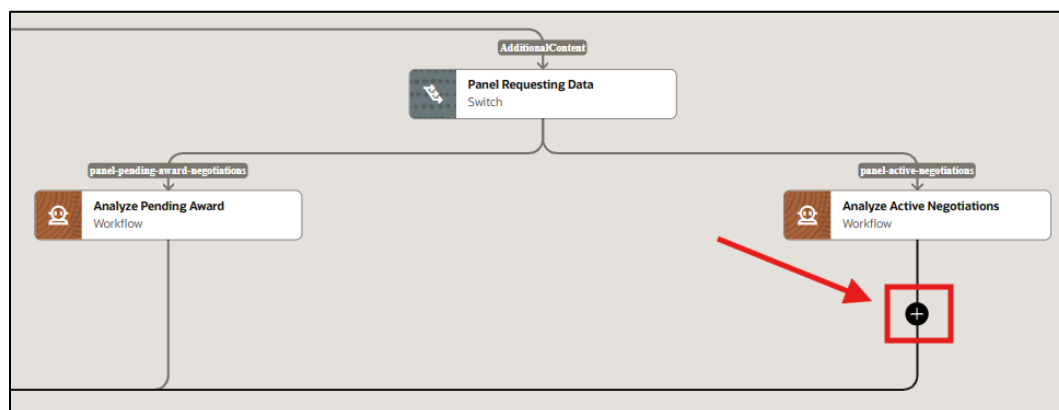

9. **Edit:** Node in **panel-active-negotiations** section of **AdditionalContent** branch:

Tab / Field	Value
Node Type	Workflow
Name	Analyze Active Negotiations
Family	PRC
Product	Sourcing
Workflow	COE Negotiations Workload Active
message	[Leave Blank]

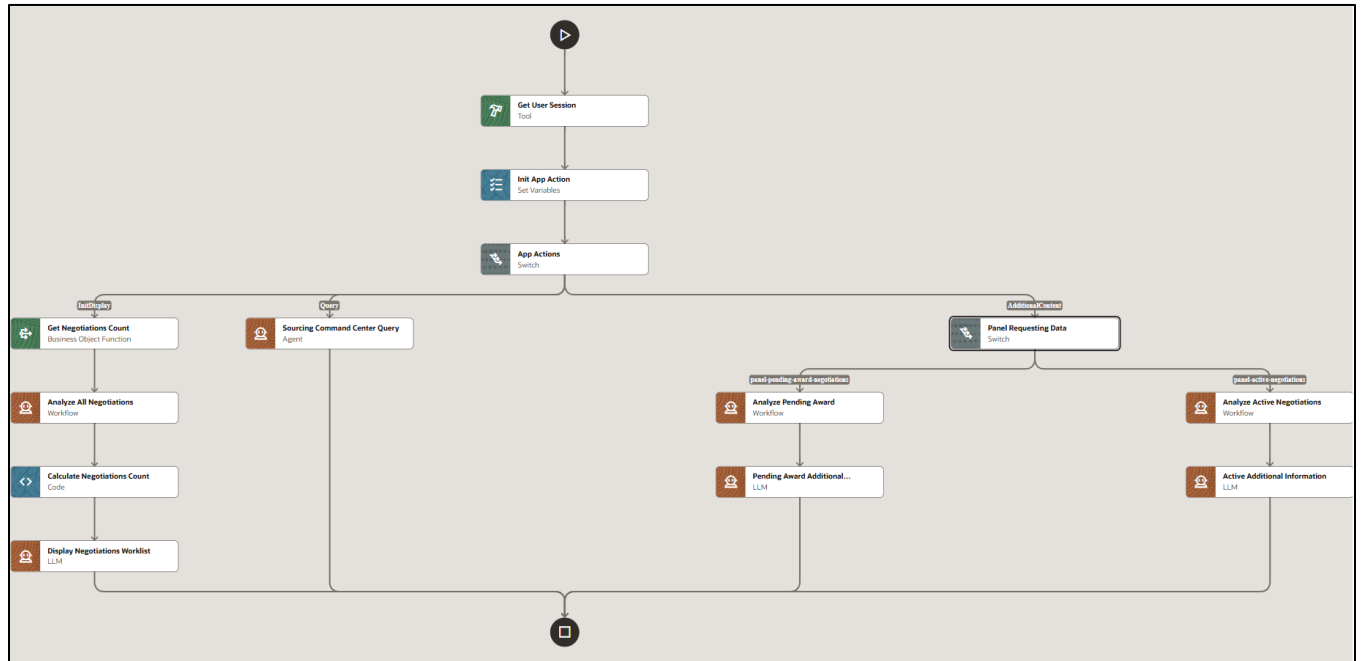

10. **Add:** Node at end of **panel-active-negotiations** section of **AdditionalContent** branch:

Tab / Field	Value
Node Type	LLM
Name	Active Additional Information
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.
App Experience	Enable Actions for the widgets (Widgets – Multi Record)

11. After all the activities above, agent will look like below

12. Test and publish the workflow agent.

Testing hints for this workflow

This workflow has three main branches for respective message hints. Perform the test below:

- **InitDisplay:** Set **OraMessageHint** to "InitDisplay". Confirm workflow produces a multi-record widget output.

This completes all tasks assigned to you for this lab exercise.

Exercise 3 – Create Negotiations Award Advisor

In this exercise, we will update workflow agent that identifies negotiations pending award that need attention — those with past award dates, prolonged closed status, or rejected awards — and recommend applying award decisions as a priority action.

Search for the “[Your name initials] Negotiations Award Advisor” under **Agent Teams** tab in **AI Agent Studio**.

Tip: this workflow has many nodes. **Save your work periodically** to avoid losing progress if your session times out.

Configuration

Go to agent setting and “**Turn On**” the **Enable to Agentic Apps** toggle under **Details** tab.

Review **Triggers** tab to check the Webhook parameters that will be used in this agent to interact with application.

Review **Variables** tab to check custom variable(s) used in this agent to move information between nodes.

When done, click on **Update** to save the changes.

Cost saved each agent run
\$ 0 USD

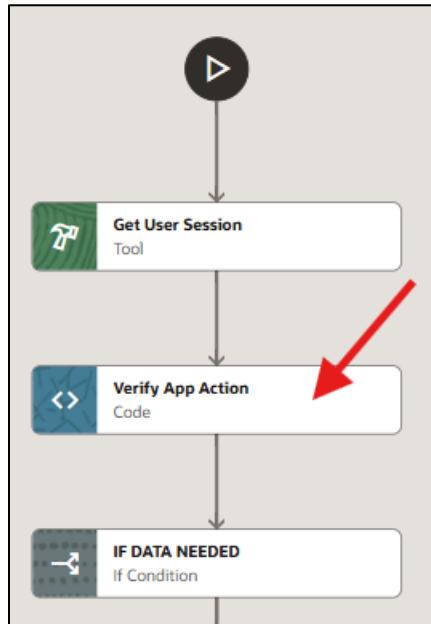

Below is how left and right segments of this agent will appear without making any changes.

Now let us review nodes in this agent and add/edit nodes to suit application requirements.

1. **Review:** Verify App Action (Code)

This step returns a string to indicate whether BO data must be fetched based on **OraMessageHint** value.

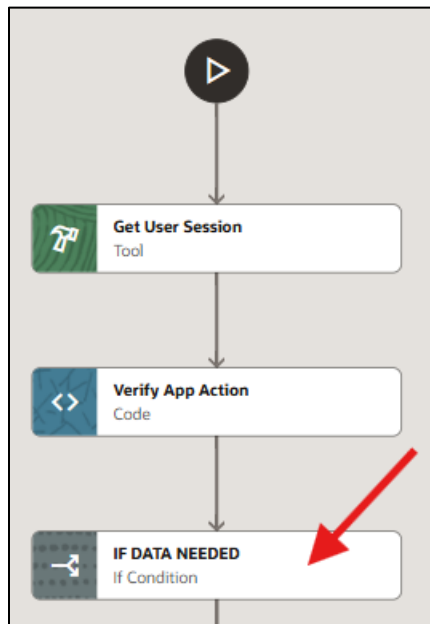

Verify App Action

Code

Name Verify App Action	Code VERIFY_APP_ACTION	Error Handler
Return Type String		
Source Code <pre> const appAction = \$context.\$app.\$OraMessageHint; return (appAction == "InitDisplay" appAction == "InitActions" appAction == "Summary" appAction == "Query" appAction == "InitCommunications" appAction == "FillParameters") ? "BUSINESS_OBJECT_DATA":"NO_DATA"; </pre>		

2. Review: IF DATA NEEDED (If Condition)

This step creates **true** and **false** branch for whether data must be fetched from business objects.

IF DATA NEEDED

If Condition

Name
IF DATA NEEDED

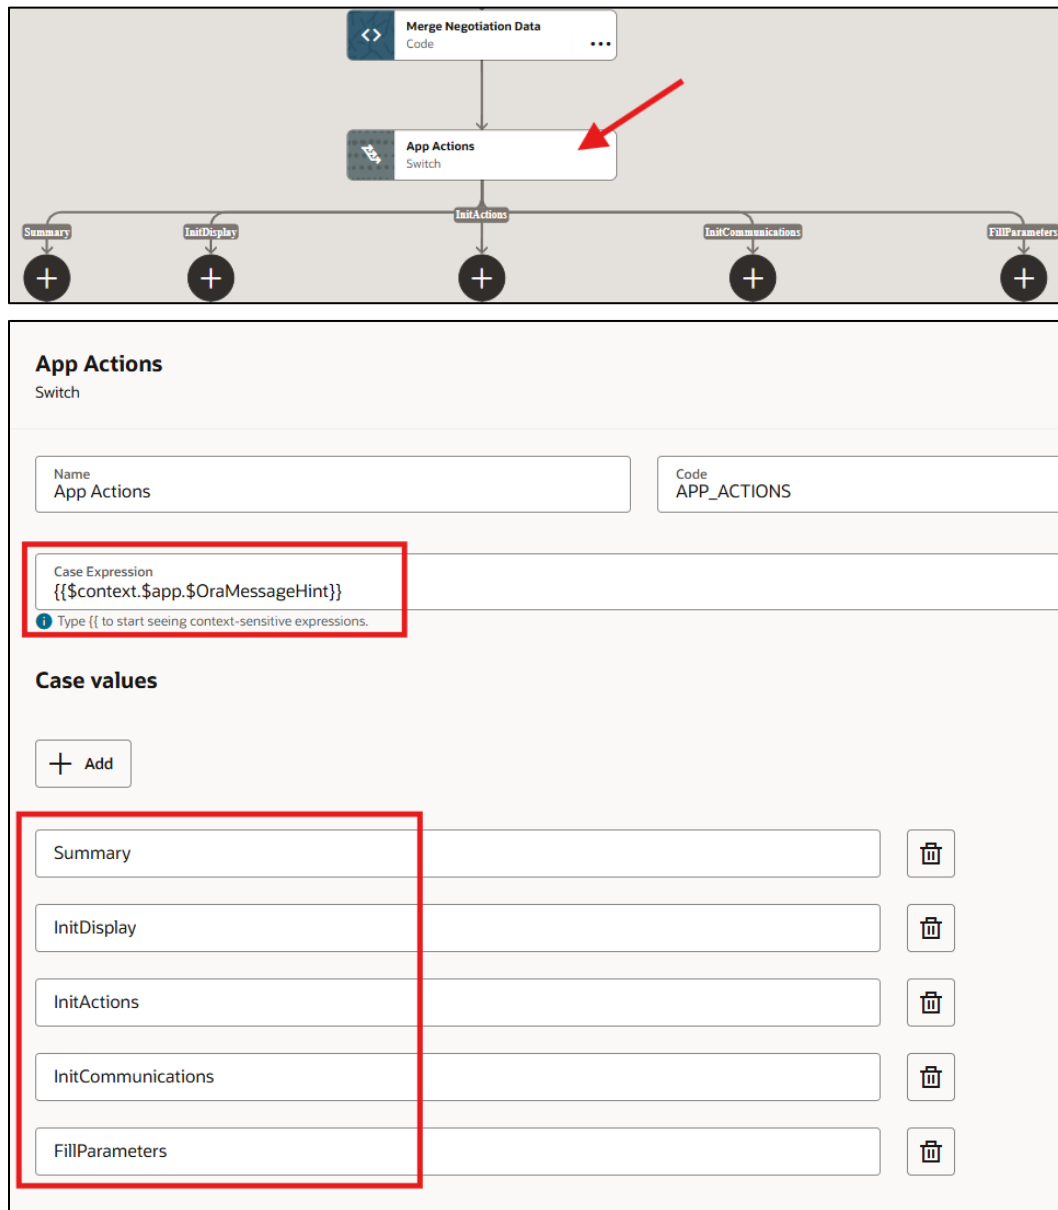

Code
IF_DATA_NEEDED

If Condition
`{{ $context.$nodes.VERIFY_APP_ACTION.$output.result === "BUSINESS_OBJECT_DATA" }}`

Type {{ to start seeing context-sensitive expressions.

3. **Review:** App Actions (Switch) of **true** branch:

This step checks for the message hint and passes process flow to the right branch.

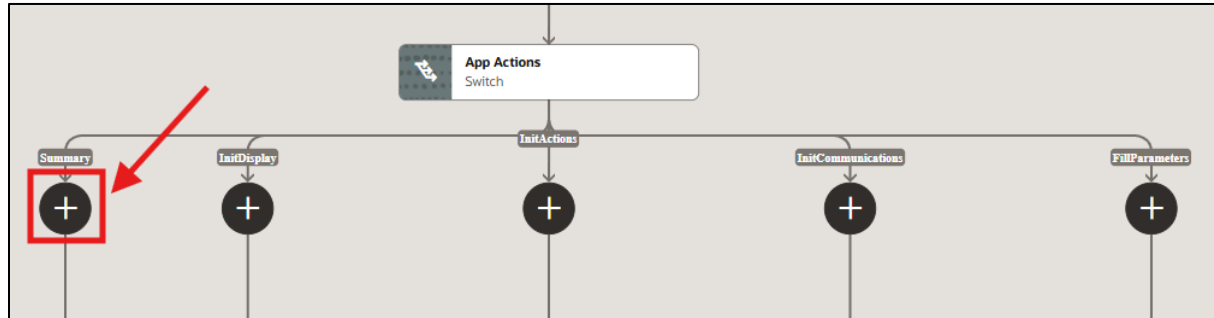

Workflow Routing Overview

The App Actions Switch routes workflow execution into five branches depending on the incoming **OraMessageHint** value:

OraMessageHint	Branch Purpose
Summary	Display 1–2-line summary of this agent
InitDisplay	Display workload summary on initial load
InitActions	Generate priority actions
InitCommunications	Generate communications
FillParameters	Generate content for application communication template

4. **Add:** Node in **Summary** branch:

Tab / Field	Value
Node Type	LLM
Name	Negotiation Awards Summarizer
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.

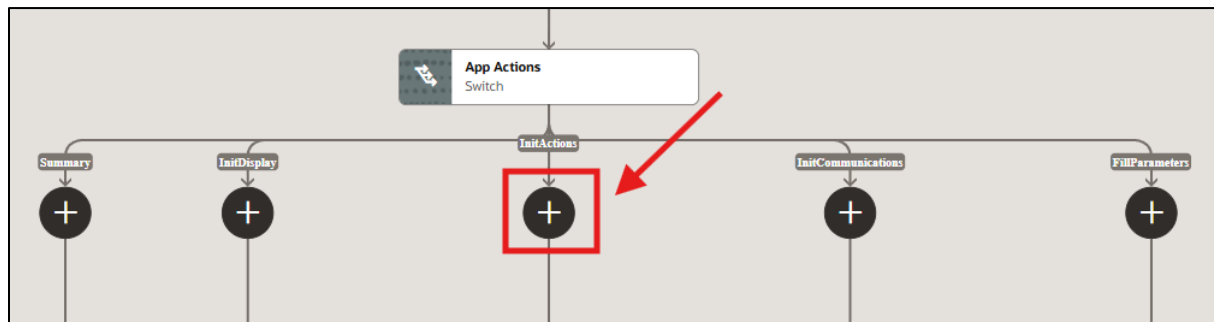

5. **Add:** Node in **InitDisplay** branch:

Tab / Field	Value
Node Type	LLM
Name	Display Negotiation Awards
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.
LLM	GPT-4.1 mini
App Experience	Enable Actions for the Widgets (Widgets – Messages List)

6. **Add:** Node in **InitActions** branch:

Tab / Field	Value
Node Type	LLM
Name	Award Init Actions
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.
LLM	GPT-4.1 mini
App Experience	Enable Actions for the widgets (Enable)

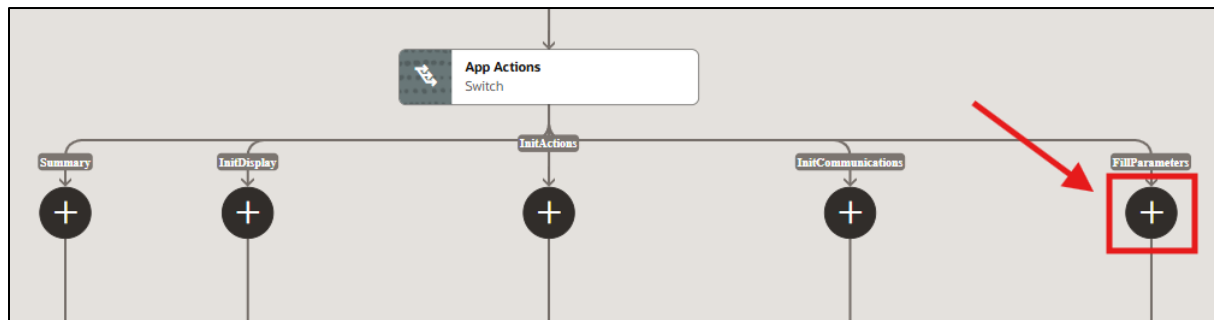

7. **Add:** Node in **InitCommunications** branch:

Tab / Field	Value
Node Type	LLM
Name	Collaboration Communication
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.
App Experience	Enable Communications for the widgets (Enable)

8. **Add:** Node in **FillParameters** branch:

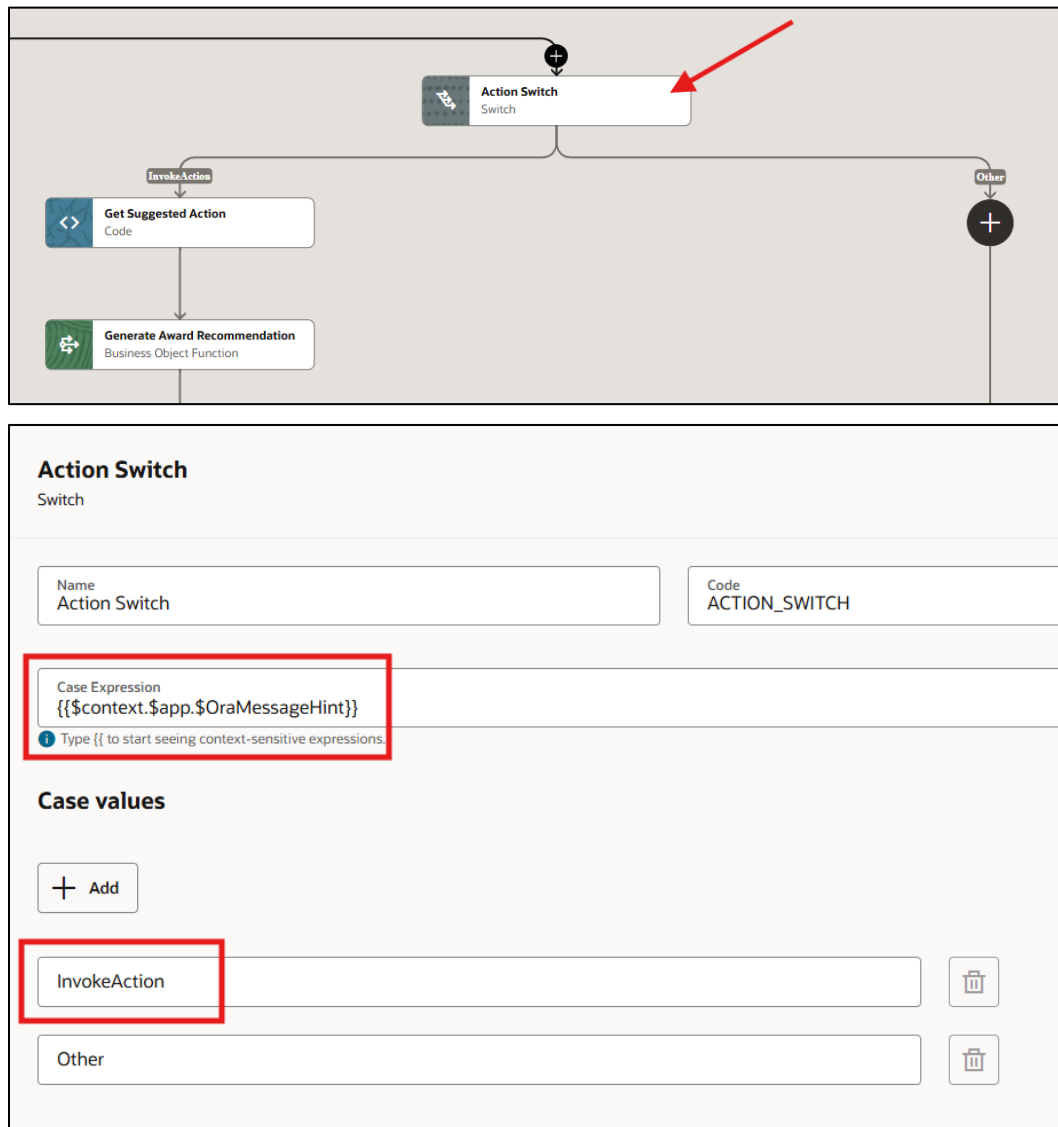

Tab / Field	Value
Node Type	LLM
Name	Generate Sourcing Status Deck
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in “Prompts.txt” shared with exercise.
App Experience	Enable Communications for the widgets (Enable)

9. **Save your work.** You have now completed the entire TRUE branch of the IF DATA NEEDED node. Return to the IF DATA NEEDED node and switch to its FALSE branch to build next step.

10. **Review:** Action Switch (Switch) of **false** branch:

This step checks for the message hint and passes process flow to the right branch.

11. **Review:** Get Suggested Action (Code) within the Switch branch of main **false** branch:

This step returns the action, context passed by the application.

Get Suggested Action

Code

Name Get Suggested Action	Code GET_SUGGESTED_ACTION
Return Type Object	

```

Source Code
//const suggestedAction = $context.$app.$OraAction;

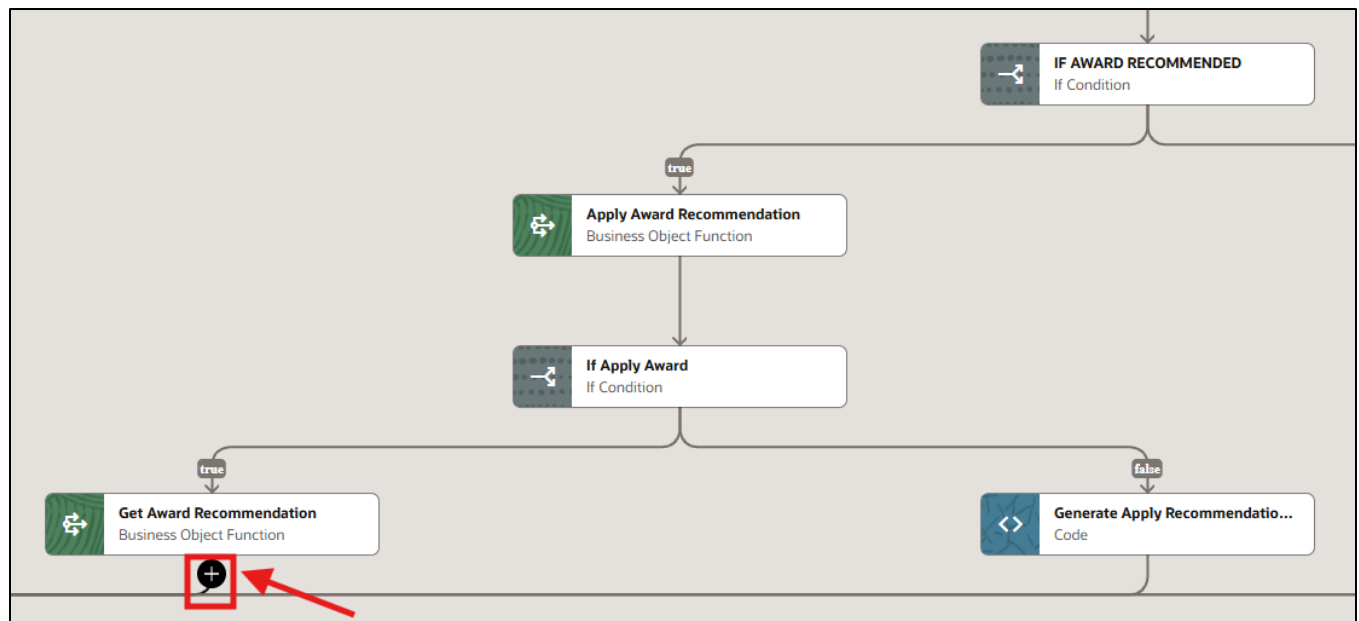

const suggestedAction = $context.$system.$inputMessage;
const [action, auctionHeaderId] = suggestedAction .split("-", 2);

return {Action: action, AuctionHeaderId: auctionHeaderId};

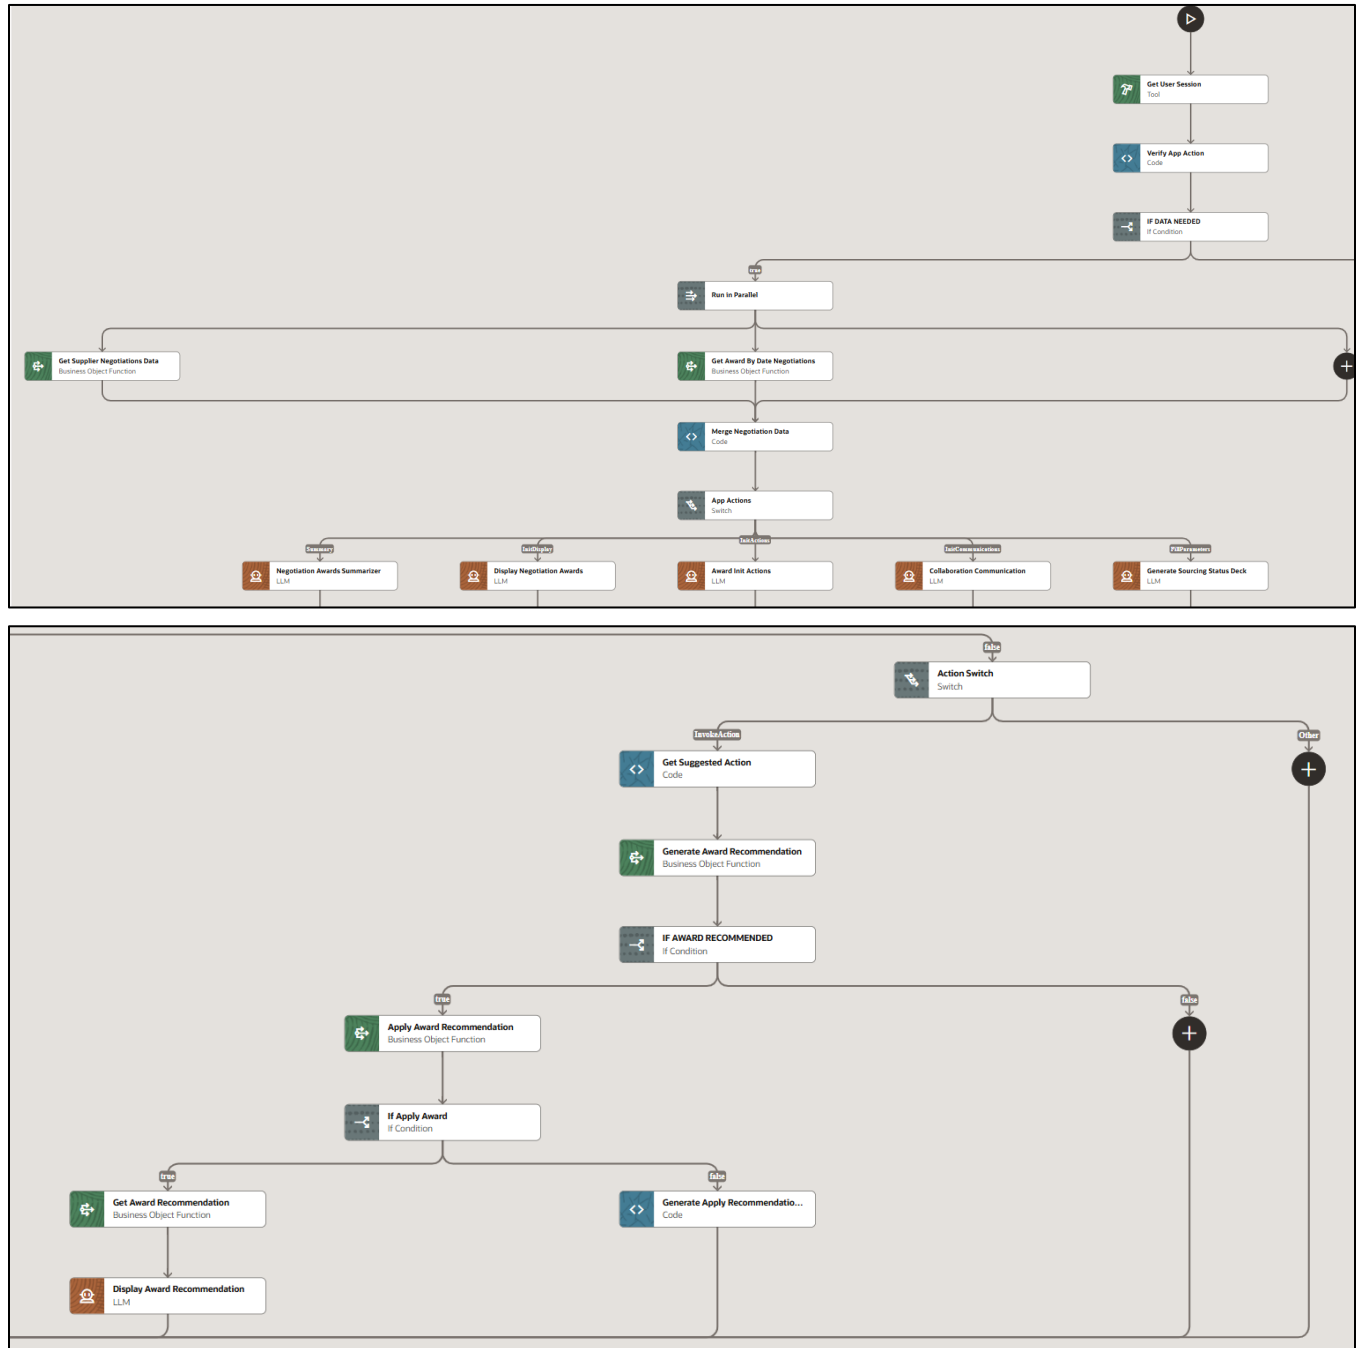

```

12. **Add:** Node at end of **true** branch of Apply Reward:

Tab / Field	Value
Node Type	LLM
Name	Display Award Recommendation
Code	[Autogenerated]
Error Handler	[Leave Blank]
Prompt	Copy from specific step in "Prompts.txt" shared with exercise.
App Experience	Enable Actions for the Widgets (Widgets – Messages List)

13. After all the activities above, left and right sections of agent will look like below:

14. Test and publish the workflow agent.

Testing hints for this workflow

This workflow has two main branches and several nested if-conditions, so test each path systematically rather than relying on a single test run. Recommended test sequence:

- **TRUE branch — InitDisplay:** Set **OraMessageHint** to "InitDisplay". Confirm workflow produces a message list widget output.
- **TRUE branch — Summary:** Set **OraMessageHint** to "Summary". Confirm workflow produces a short text summary.
- **TRUE branch — FillParameters:** Set **OraMessageHint** to "FillParameters". Confirm workflow generates the status deck content.
- **FALSE branch — InvokeAction success path:** Set **OraMessageHint** to "InvokeAction" and provide an input message in the form "applyRecommendedAward-<AuctionHeaderId>" using a valid pending-award auction ID e.g. 300000152404423. Confirm workflow displays the recommendation.

Input Variables

Trigger Type

Rest

Q

applyRecommendedAward-300000152404423

Sample Trigger Input

```
{
  "OraMessageHint": "InvokeAction"
}
```

This completes all tasks assigned to you for this lab exercise.

Exercise 4 – Create Sourcing Command Center App

Now that both workflow agents are published, you will compose them into an agentic application: the Sourcing Command Center. The app presents the two agents side-by-side in two lanes, configures actions and communications, and wires up navigation to the Negotiation Details app.

1. **Open AI Agent Studio and create a new application.**

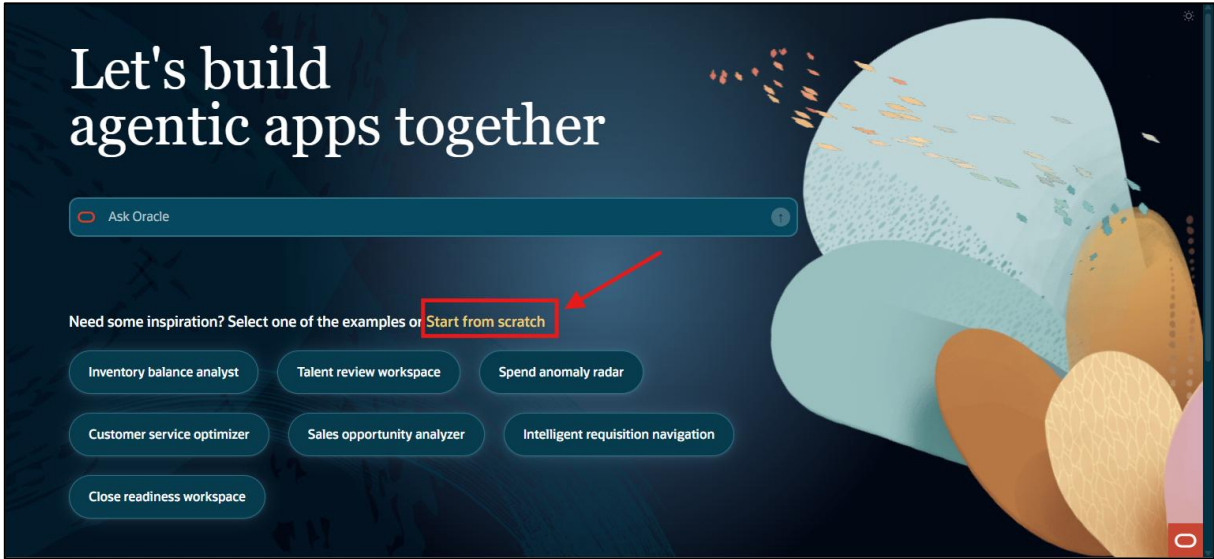

The screenshot shows the 'New Application' form in Oracle AI Agent Studio. The form is divided into three main sections: Name, Code, and Description. The Name field is labeled 'Name' and contains the text 'SHCO Sourcing Command Center'. The Code field is labeled 'Code' and contains the text 'SHCO_SOURCING_COMMAND_CENTER'. The Description field is labeled 'Description' and contains the text 'Sourcing Command Center'. A red box highlights the Name and Description fields. A red arrow points to the 'Update' button at the bottom right of the form. The 'Cancel' button is also visible next to it.

Application configuration

Field	Value
App Name	[Your name initials] Sourcing Command Center
App Code	[Autogenerated]
Description	Sourcing Command Center

2. **Start from scratch.**

On the "Let's build agentic apps together" screen, click Start from scratch.

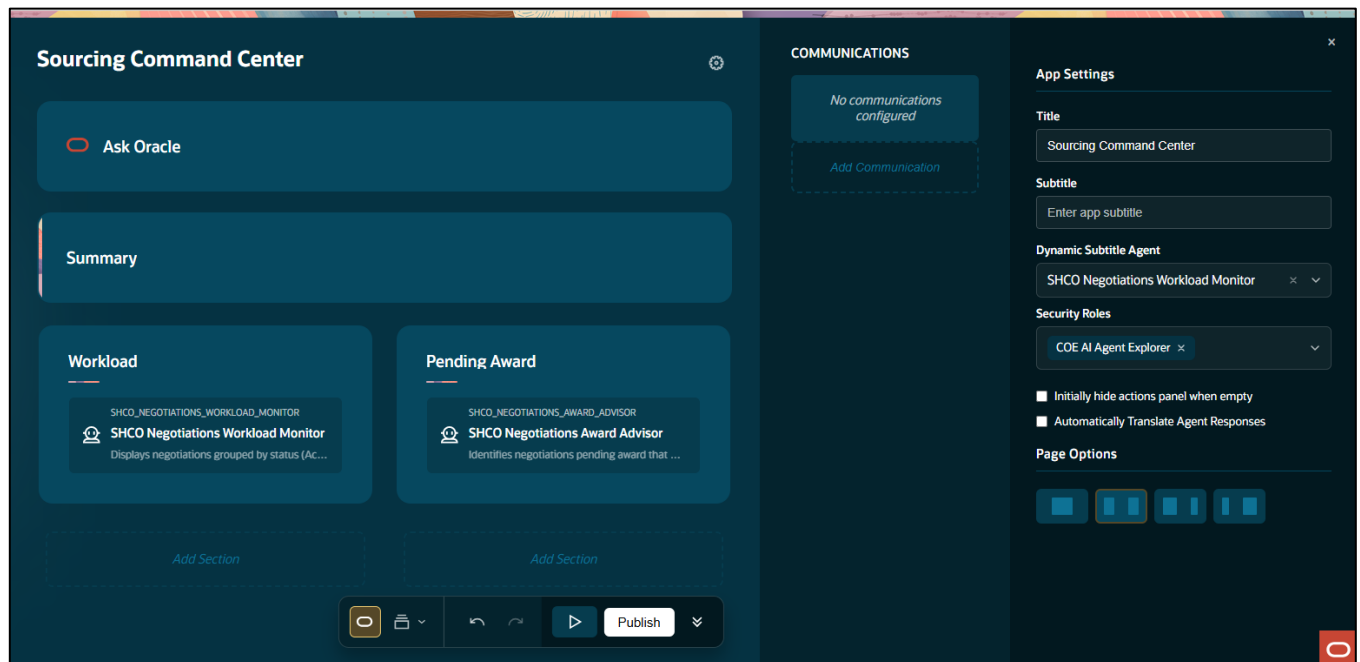

3. Configure new app settings.

About the Swimlanes layout: this lab uses the Swimlanes page pattern — agents are displayed in side-by-side columns (lanes). Choose the **Page Options icon that shows two vertical bars** to select the two-lane swimlane pattern.

The **Negotiations Workload Monitor** agent will sit in the left lane.

The **Negotiations Award Advisor** agent will sit in the right lane.

Field	Value
Title	Sourcing Command Center
Dynamic Subtitle Agent	Select the Negotiations Workload Monitor agent updated in Exercise 2
Security Role	COE_AI_AGENT_EXPLORER
Initially Hide Actions	false
Page Options	2 Columns (Equal)
Layout	2 (two lanes)
Left Lane Container Title	Workload
Right Lane Container Title	Pending Award
Workload Agent (left lane)	Select the Negotiations Workload Monitor agent updated in Exercise 2
Pending Award Agent (right lane)	Select the Negotiations Award Advisor agent updated in Exercise 3

4. Add Panels to the Workload section.

Panels appear when a user selects a section in either lane. Add the two panels below; they correspond to the panel-pending-award-negotiations and panel-active-negotiations branches you built in the **Negotiations Workload Monitor**.

#	Name	Header
1	panel-pending-award-negotiations	Pending Award Negotiations
2	panel-active-negotiations	Active Negotiations

The screenshot displays the Sourcing Command Center interface. The main workspace shows two sections: 'Workload' and 'Pending Award'. The 'Workload' section is highlighted with a red arrow. The configuration panel on the right shows the 'Section' configuration for 'Workload'. The 'Section Title' is 'Workload', the 'Agent Code' is 'SHCO Negotiations Workload Monitor', and the 'Include in summary?' and 'Include in actions?' checkboxes are checked. The 'Initial Summary Prompt' and 'Initial Actions Prompt' fields are empty. The 'Initial Graphics Display Instructions' field is also empty. The 'Override widgets used?' checkbox is unchecked, and the 'Include in Communications?' checkbox is checked. The 'Panels' section is empty, and the 'Add Panel' button is highlighted with a red arrow.

Each panel appears in the Add Panel side sheet:

← Back×

Name

Header

Prompt

Delete Panel

← Back×

Name

Header

Prompt

Delete Panel

5. Configure the Left Lane (Workload) agent settings.

Click the Workload section in the left lane to open the agent setting side sheet. Configure it as shown — keep the agent included in summary, attach both panels, and leave Initial Summary Prompt blank.

The screenshot shows the Sourcing Command Center interface with the Workload agent settings side sheet open. The side sheet is titled "Section" and contains the following configuration:

- Section Title:** Workload
- Agent Code:** SHCO Negotiations Workload Monitor
- ☒ **Include in summary?**
- Initial Summary Prompt:** Enter summary prompt
- ☐ **Include in actions?**
- Initial Graphics Display Instructions:** Enter additional prompt for initial graphics display generation
- ☐ **Override widgets used?**
- ☐ **Include in Communications?**
- Panels:** Pending Award Negotiations, Active Negotiations

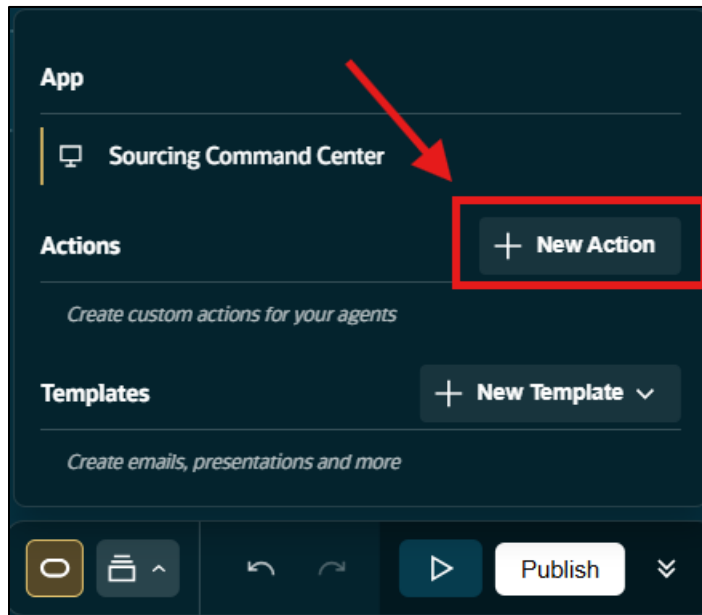

6. Configure the Right Lane (Pending Award) agent settings.

Click the Pending Award section in the right lane and open its agent setting side sheet. This agent participates in summary, actions, and communications.

The screenshot shows the Sourcing Command Center interface with the Pending Award agent settings side sheet open. The side sheet is titled "Section" and contains the following configuration:

- Section Title:** Pending Award
- Agent Code:** SHCO Negotiations Award Advisor
- ☒ **Include in summary?**
- Initial Summary Prompt:** Enter summary prompt
- ☒ **Include in actions?**
- Initial Actions Prompt:** Enter actions prompt
- Initial Graphics Display Instructions:** Enter additional prompt for initial graphics display generation
- ☐ **Override widgets used?**
- ☒ **Include in Communications?**
- Panels:** No panels configured

7. Add the Apply Award Recommendation action.

Open the App Settings panel, scroll to Actions, and click + New Action.

Field	Value
Action Code	applyRecommendedAward
Display Name	Apply Award Recommendation
Description	Generate award recommendations and apply it.
Step Type	Send Agent Command
Parameters	Enable "Send Payload as Context"

8. Add the Navigate To Negotiation action.

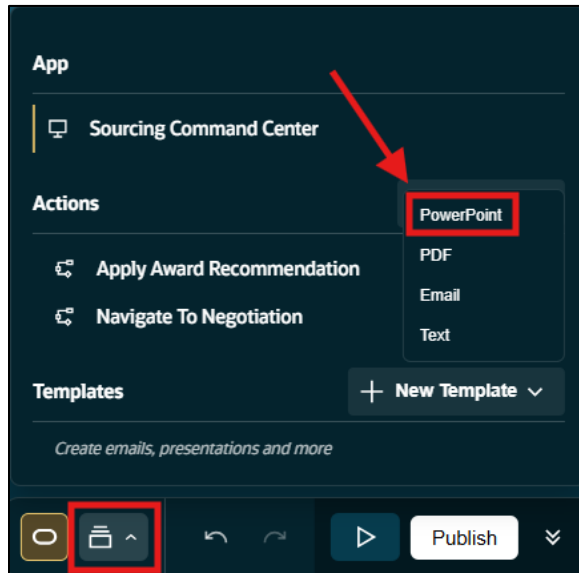

Choosing the correct Step Type: For this action, the Step Type is **Navigate to App** (not **Send Agent Command**). The **Navigate to App** step type makes the App Code dropdown appear so you can pick the destination agentic application.

Field	Value
Action Code	navigateToNegotiation
Display Name	Navigate To Negotiation
Description	[Leave Blank]
Step Type	Navigate to App
App Code (dropdown)	Negotiation Details
Parameters	Enable "Pass Payload to Context"

9. Add the Sourcing Portfolio Status Review communication.

To add communication, a template is needed. Let's add a template first.

From the panel, Select "+ New Template" and add a PowerPoint with name "Sourcing Portfolio Status Review".

Add three slides to the template. For each slide, paste the corresponding prompt from Prompts.txt.

Slide 1 – Portfolio Snapshot

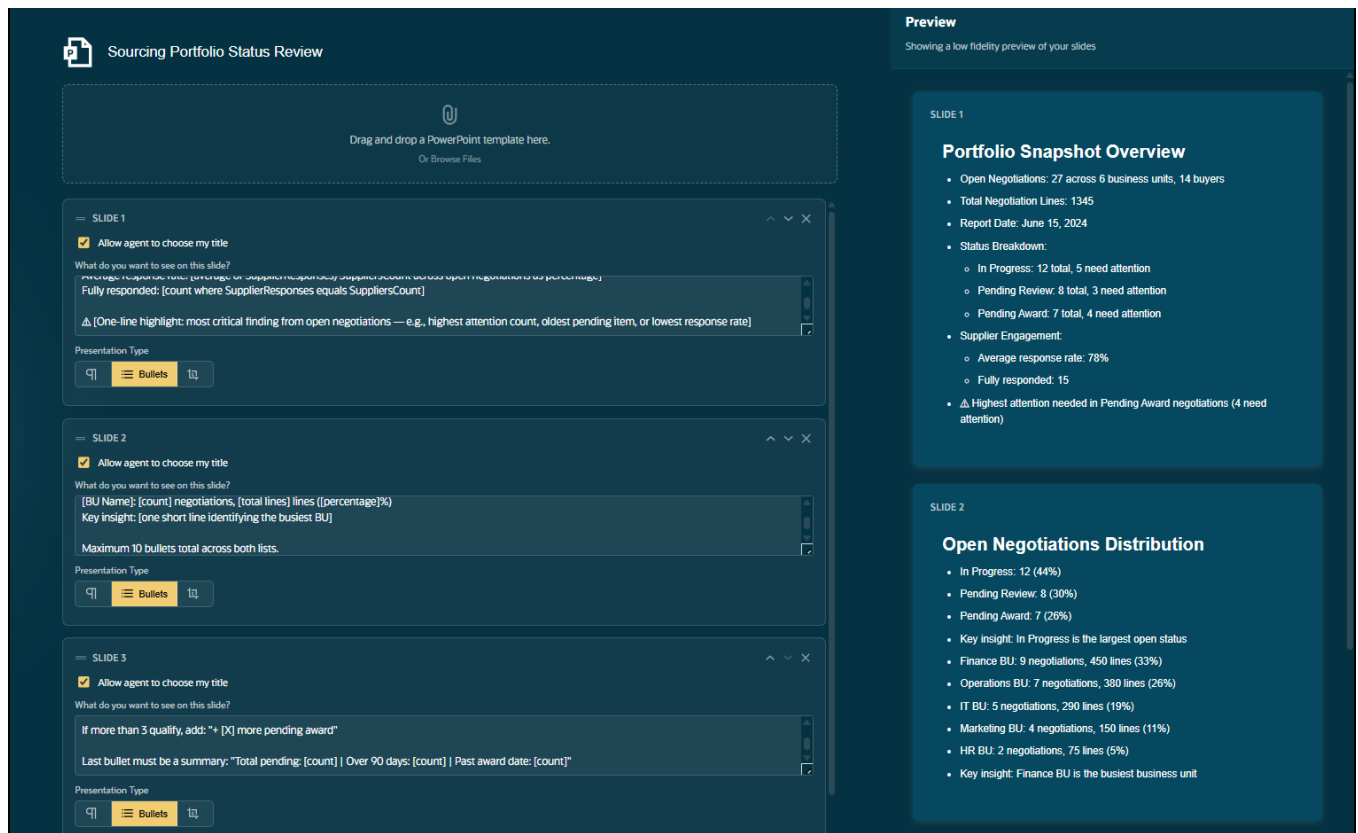

Field	Value
Presentation Type	bullets
Enable	Allow agent to choose my title
What do you want to see on this slide?	Paste the Slide 1 prompt from Prompts .txt

Slide 2 – Pending Award Detail

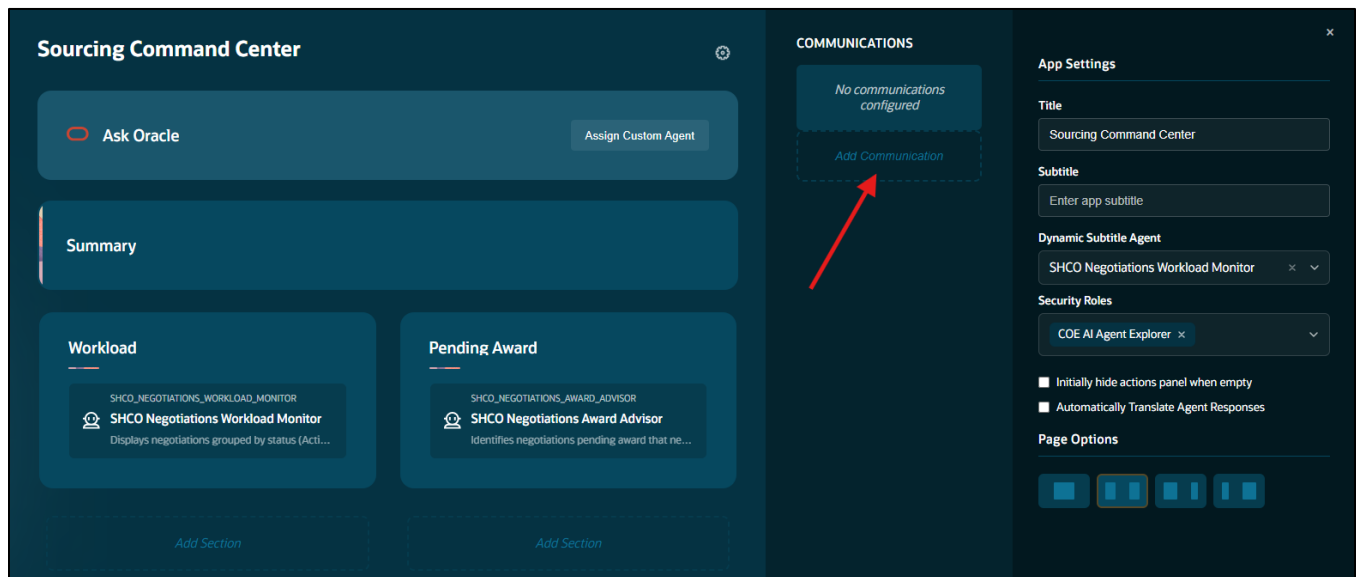

Field	Value
Presentation Type	bullets
Enable	Allow agent to choose my title
What do you want to see on this slide?	Paste the Slide 2 prompt from Prompts .txt

Slide 3 – Distribution Breakdowns

Field	Value
Presentation Type	bullets
Enable	Allow agent to choose my title
What do you want to see on this slide?	Paste the Slide 3 prompt from Prompts .txt

10. Now on the app, In the Communications panel on the right side of the app builder, click + Add Communication.

11. Add communication with the details below:

Field	Value
Title	Sourcing Portfolio Status Review
Description	This deck is intended for procurement leadership in weekly or biweekly sourcing review meetings.
Applicable Agent	[Your Initials] Negotiations Award Advisor
Template	Template added in Step 9

10. Publish the app.

When you have configured the two lanes, two panels, two actions, and the communication template, click Publish at the bottom of the builder.

Final app layout

After publishing, your Sourcing Command Center should look like this:

Sourcing Command Center

Application Validation

After publishing the Sourcing Command Center, walk through the validation checks below to confirm every piece you configured behaves as expected.

Validate Application Initialization

#	Validation	Expected Result
1	Open the Sourcing Command Center app.	Summary, Workload, Pending Award, Priority Actions, and Communications sections all load successfully.
2	Verify the Workload summary.	Negotiation counts and "Needing Attention" badges are displayed correctly.
3	Verify the Pending Award section.	Pending award negotiations and attention indicators are displayed correctly.
4	Verify the Priority Actions panel.	Recommended award actions are displayed in the right panel.

Validate Query Experience

#	Sample Question	Expected Result
1	"List the active negotiations"	The app drills down into details of active negotiations.
2	"Give more details for negotiation 31757"	Pending award negotiation details are displayed.

Query 1 – sample result

Sourcing Command Center

Ask Oracle

List the active negotiations

Active Supplier Negotiations

Here is the list of active negotiations currently in progress:

These negotiations are all active and have varying closing dates and supplier participation. Let me know if you want details on any specific negotiation.

Negotiation ID	Type	Status	Closes
JSK10B - IT Equipment Upgrade Negotiation 31757 - RFQ Open since 2016-03-10, closes in 232 days	RFQ	Active	Closes 2026-12-31

Generated using COE Negotiations Workload Monitor.

Query 2 – sample result

Sourcing Command Center

Ask Oracle

Give more details for negotiation 31757

Negotiation 31757 Details

Negotiation 31757 titled "JSK10B - IT Equipment Upgrade" is currently active under the US1 Business Unit. It is a standard RFQ negotiation managed by buyer Calvin Roth. The negotiation is set to close on December 31, 2026, and uses a blanket purchase agreement outcome. The payment terms are Net 30, and shipping is handled by UPS with the buyer paying freight. The currency is US Dollar (USD).

There is one line item in this negotiation: "X100 Server" with an estimated quantity of 10 units and a current price of \$7,000 each. Price breaks are enabled, and suppliers can modify price breaks. The negotiation allows multiple responses and revisions from suppliers, with blind sealed bidding for response visibility.

Five suppliers are invited, including Advanced Corp, EIP Inc, Lee Supplies, Midtown Computer Supplies, and RJK Inc. The collaboration team consists of three members: May Gee (Buyer), Calvin Roth (Procurement Manager), and Casey Brown (Finance Administrator).

The negotiation includes three sections with a total of 10 requirements, covering company information, general capabilities, and internal evaluations. Some requirements are scored, and attachments are allowed for certain questions.

Summary of key details:
